

SETTING UP YOUR 3001F2 PAGODA FOUNTAIN

- 1) Place 3001PH Pedestal Basin on a firm, level surface. Position it such that the small access opening at the bottom faces the side you wish the power cords to exit. It is recommended that two people work together to set up this fountain.
- 2) Before placing the 3001TH Top on the Pedestal, attach the wider tubing to the barb under the light. Then insert the light, with its tubing and long power cord first, down through the Pagoda as shown at right.
- 3) Tightly insert the threaded end of the barb x thread adapter into the lower end of the tube.
- 4) Next, place the stopper around the pump power cord about 10" from the pump. The pump power cord should fit through the larger of the stopper's holes. Then insert the light's power cord into the stopper's smaller hole, about 24"-30" below the light itself.
- 5) Insert the adapter into the pump exhaust.
- 6) Attach the more narrow water tube to the pump adapter.
- 7) Mount the clamp-like water restrictor near the top end of the small tube as shown at bottom right. Turn the clamp down tight enough to hold in place.
- 8) Now, as one person holds the Pagoda top above the Pedestal (you may rest it tipped on the Pedestal, but use some padding, not allowing concrete to touch concrete until your final placement) the other person can slip the two power cords all the way down through the hole in the middle of the Pedestal. Then, push the rubber stopper into the hole and press firmly into place.
- 9) Push the smaller tube over the barb which connects to the larger tube.
- 10) Slowly set the Pagoda top in place on the Pedestal, checking as you do to make sure not to crimp tubes or cords with the concrete.
- 11) Holding the Pagoda in place, gently lean the fountain back while the second person pulls the power cords out from the bottom.
- 12) Make sure everything is level again. Use supplied shims if necessary between the Pedestal and Pagoda top.
- 13) Read pump instructions. Then fill with water. Turn on pump and check again to make sure the fountain is level and functions evenly, correcting with shims as needed.
- 14) Make sure to read supplied winterizing instructions for long fountain life and enjoyment.
