

## 4941F2 SET UP INSTRUCTIONS

- 1) Prepare a suitable location for your new fountain. The fountain should sit on a firm and level pad.
- 2) Always follow local electrical codes, making sure to connect to a safe GFCI circuit.
- 3) Set the 4941AH Juggling Act piece on your chosen setting.
- 4) Thread the 15-45H Barbed Adapter into the coupling opening found in the back of the main bowl (see Overhead View below).
- 5) Slip the Restrictor onto the center of the tube. Tighten the Restrictor just enough to hold it in place on the tube.
- 6) Insert the Exhaust Fitting into the top of the pump. Place the pump into the bowl with the pump's power cord exiting out the back of the bowl, through the slot as shown.
- 7) Push one end of the tube over the barbed adapter and the other end over the pump exhaust fitting.
- 8) Now, carefully place the 4941BH on the rim of the bottom bowl. You will notice that the largest notch in the rim of the 4941BH should point toward the center of the bottom bowl and the contours of the 4941AH will hold the small bowl secure.
- 9) Read your pump instructions.
- 10) Fill the bottom bowl. Then plug the pump in to enjoy your fountain. If the pump does not immediately begin working, there may be an "airlock" within the impeller chamber. Simply unplug and plug in a few times and it should start.
- 11) If you desire to reduce the water flow, reach inside and tighten the Restrictor until the water flow matches your preference.
- 12) Save this instruction and make sure to winterize according to details below.

### **IMPORTANT – WINTER CARE**

Winter ice build-up can cause damage to concrete statuary. Follow these tips to reduce winter weathering to your fountain:

- \* Disconnect power to pumps.
- \* Remove adapter from bottom bowl to open drains and let all moisture out. Keep drains open throughout winter.
- \* Place an absorbant material like burlap, blankets, etc. inside vases/bowls and cover all with a Henri fountain cover.
- \* Do not allow snow or ice to build up on or against the concrete. Remove snow before it turns to ice. Do not use salt or chemical ice removers as these may damage concrete.

By following these simple and sensible precautions during the winter season, you will protect your fountain for years of beauty and enjoyment.
