

# SET UP INSTRUCTION FOR 5515F4

1) Prepare a suitable location for your new fountain. The fountain bowl needs the support of a firm and level surface.

2) Always follow local electrical codes. Make sure to connect to a safe GFCI circuit.

3) With the assistance of others, place the heavy bowl on its location. Notice that there is a groove under the bowl intended to direct the pump cord out toward your power supply. Make sure to turn the bowl so this groove aims toward your power supply.

4) Place the pump in the middle of the bowl and push the power cord down through the open hole and out the side underneath the bowl, using the groove mentioned above. Place the rubber stopper around the power cord as shown in the drawing and press the stopper down tightly in place in the hole to make the bowl water-tight.

(\* If you purchased the optional AB873L light package with optional stopper, this is the time to set the lights near the edge of the bowl and run the extra power cord down along with the pump cord. Use the 2-hole stopper around the power cords instead of the standard one-hole stopper, push it in tight to seal the bowl.\*\*) Then thread the smaller adapter into the top of the pump.

5) Reach under the 5515 Tiki Column and thread the larger adapter into place in the center coupling. Then attach the tube to the barb end of that adapter.

6) Again with the help of others, move the heavy Tiki Column into the center of the Bowl, setting it down over the pump area. You may want to angle one of the column's faces toward your chosen viewing area.

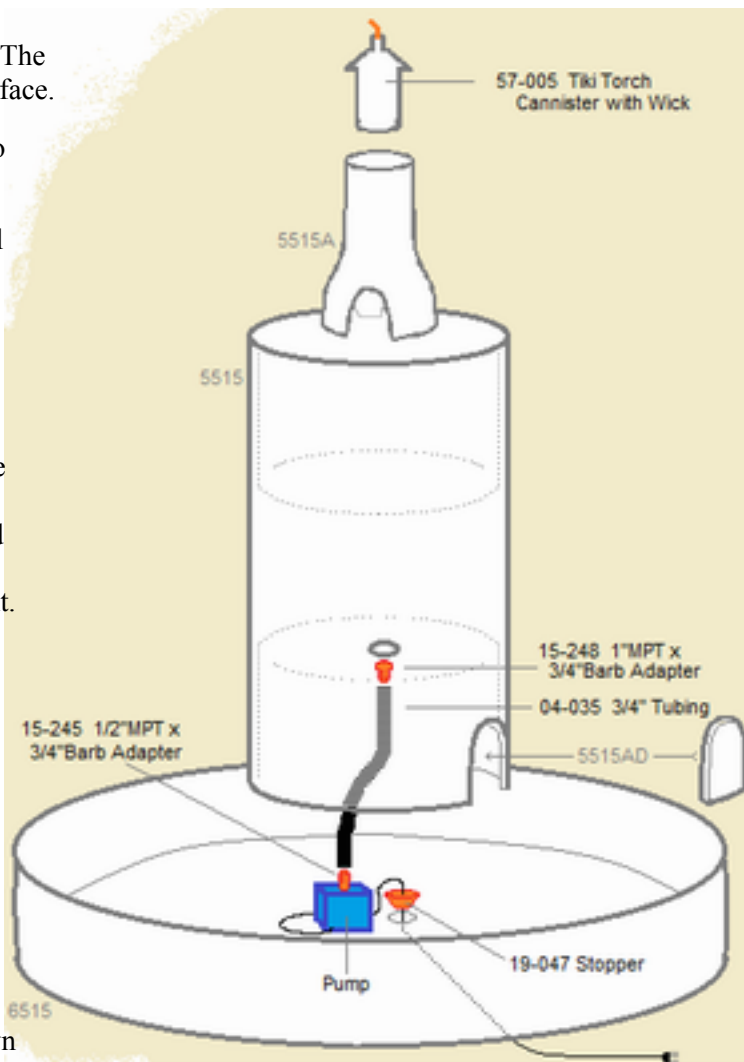

7) Reach inside the Tiki Column's access area and push the open end of the tube onto the barb adapter on the pump. Then place the 5515AD Access Door in the Tiki Column's access opening.

8) Place the 5515A Canister Holder inside the top of the Tiki Column. This Holder is designed to fit Tiki brand torch canisters and one unfilled reusable canister and wick is provided for your convenience. This canister will allow you to refill it with Tiki brand decorative torch fuel as you wish for ongoing enjoyment. Consumers are advised to read the instructions on the canister and on any torch fuel they purchase and to follow Tiki instructions for safe use. *Henri Studio recommends regular inspection of the canister and replacement of it once visible corrosion is apparent. Canisters and fuel can be found at most garden centers and home improvement stores.*

9) Read the pump instructions, then fill your bowl with water. Plug in the pump to enjoy your fountain. (The pump should take a little while to fill the upper chamber of the column with water, but if the pump does not immediately begin working, there may be an "airlock" within the impeller chamber. Simply unplug and plug back in a few times and it should start.) (Shims are provided should you need to "level" the Column.)

10) Save this instruction and make sure to winterize according to details below.

Csd

## **IMPORTANT – WINTER CARE**

Winter ice build-up can cause damage to concrete statuary. Follow these tips to reduce winter weathering to your fountain:

- \* Disconnect power to pumps and lights.
- \* Remove plugs / stoppers in all fountain bowls to open drains and let all moisture out. Keep drains open throughout winter.
- \* Place an absorbant material like burlap, blankets, etc. inside vases/bowls and cover all with a Henri fountain cover.
- \* Do not allow snow or ice to build up on or against the concrete. Remove snow before it turns to ice. Do not use salt or chemical ice removers as these may damage concrete.
