

5612F2 SET UP INSTRUCTIONS

1) This fountain is simple to set up, but it includes two very heavy pieces! Therefore, make sure to prepare a firm and level surface for the fountain. With proper help, place your fountain Basin on that surface. Make sure to face the designed front of the basin toward your primary viewing point.

2) Always follow local electrical codes and connect to a safe GFCI circuit.

3) Install the thread-by-barb adapter into the top of the pump and place the pump in the center of the Basin. Slip the pump cord up and drape it out the back middle of the basin.

4) Push one end of the water tube onto the barb of the pump adapter. Drape the tube out the back of the basin as well, along with the pump cord.

5) With help, set the tall concrete wall piece on top of the basin as shown. Make sure to leave a little room in back for the tube and pump cord to exit the basin.

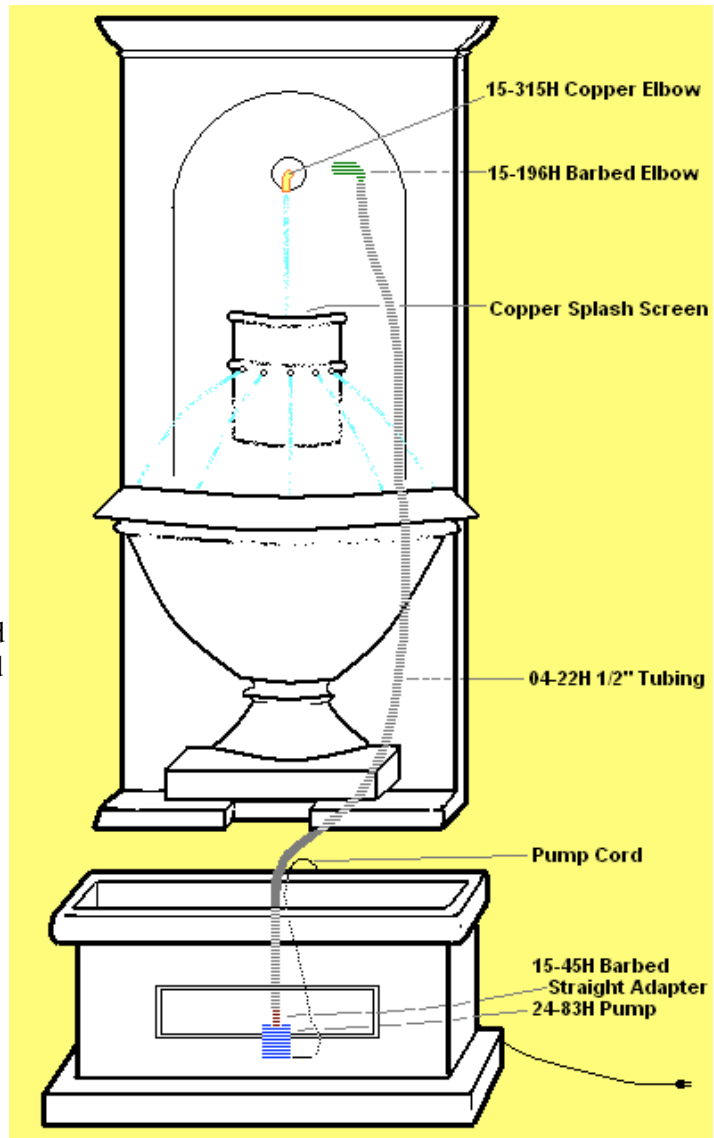

6) Near the top of the wall front you will find a pre-installed copper elbow. Directly behind that – on the back side of the wall – install the plastic barbed elbow. Then connect the other end of the water tube to the barbed end.

7) To prevent excessive splashing, place the copper splash screen below the copper elbow as shown.

8) Fill the basin with water, either from behind where the tube exits or through the vase portion of the wall.

9) Read your pump instructions. Then, connect the pump to your power supply to enjoy your fountain. If the pump does not immediately begin working, there may be an “airlock” within the impeller chamber. Simply unplug and plug in a few times and it should start.

10) Save this instruction and make sure to winterize according to details below.

IMPORTANT – WINTER CARE

Winter ice build-up can cause damage to concrete statuary. Follow these tips to reduce winter weathering to your fountain:

* Disconnect power to pumps.

* Remove plugs / stoppers in all fountain bowls to open drains and let all moisture out. Keep drains open throughout winter.

* Place an absorbant material like burlap, blankets, etc. inside vases/bowls and cover all with a Henri fountain cover.

* Do not allow snow or ice to build up on or against the concrete. Remove snow before it turns to ice. Do not use salt or chemical ice removers as these may damage concrete.
