

SETTING UP THE 5750F2

Make sure to place your fountain on a firm area which will not settle. Note: Always follow local electrical codes and use a 110V GFCI protected outlet.

1) After preparing your secure setting, place the 7311 and 6810 on that setting.

2) Place the pump in the middle of the 6810 and run its power cord down through the hole. Reach under the 7311 and pull the cord out toward your power supply. Seal the hole in the 6810 by installing the slit rubber stopper around the cord and press downward, leaving less than 1/4" above the floor of the bowl.

3) Attached the fitting set to the pump as shown. Some of this may be preassembled.

4) Place the 7195 in the 6810, over the pump and fittings. Pull the two 18" long tubes up and through the 7195.

5) Push the ends of these two tubes onto the pipes under the 5750 figure piece as you lower it into place (with help from others).

6) Read your pump instructions. Fill the bottom bowl with water. Then plug the pump in to enjoy your fountain. If the pump does not immediately begin working, there may be an "airlock" within the impeller chamber. Simply unplug and plug in a few times and it should start.

Csd 4/19

IMPORTANT – WINTER CARE

Winter ice build-up can cause damage to concrete statuary. Follow these tips to reduce winter weathering to your fountain:

- * Disconnect power to pumps and lights.
- * Remove plugs/stoppers in all fountain bowls to open drains and let all moisture out. Keep drains open throughout winter.
- * Place an absorbant material like burlap, blankets, etc. inside vases/bowls and cover all with a Henri fountain cover.
- * Do not allow snow or ice to build up on or against the concrete. Remove snow before it turns to ice. Do not use antifreeze, salt or chemical ice removers as these may damage concrete.

Caution: The use of Chlorine or Chlorine Bleach or water coloring additives may damage the finish of your fountain.
