

# SETTING UP THE 5897F3

Make sure to place your fountain on a firm area which will not settle. Note: Always follow local electrical codes and use a 110V GFCI protected outlet. Do not let children climb on fountain.

1. Set 7898 Basin on your prepared, level, and stable site. Place pump in basin. Push power cord out bottom hole and pull from underneath, out of cord notch, toward your power supply. Open slit in stopper, place around power cord near pump, close, and press stopper into hole, leaving about 1/8" showing above the hole.
2. Thread the tee into the top of the pump.
3. Push the two black tubes onto the tee.
4. Push/twist the threaded end of the barbed adapters into the other end of the black tubes.
5. Place a Flow Restrictor around the middle of each clear tube. Then push the clear tube onto the barbed end of the adapters.
6. With help, set the 5897A Statue on the basin. Tip it back enough to push the end of one clear tube onto the copper tube underneath the statue. Push the other tube up through the hole in front of the woman, as shown.
7. Set the 5897B Pedestal Bowl in the recess in front of the woman, pushing the tube onto the copper pipe underneath as you set it down.
8. Thread the brass nipple into place in the bowl. Then go down to instruction #9.
9. Fill all bowls and pool with water. Read pump instructions. Turn on the pump. If it does not immediately begin working, there may be an "airlock" within the impeller chamber. Simply unplug and plug in a few times and it should start.

START ...

Caution: The use of Chlorine or Chlorine Bleach or water coloring additives may damage the finish of your fountain.

### IMPORTANT – WINTER CARE

Winter ice build-up can cause damage to concrete statuary. Follow these tips to reduce winter weathering to your fountain:

- \* Disconnect power to pumps and lights.
- \* Remove plugs/stoppers in all fountain bowls to open drains and let all moisture out. Keep drains open throughout winter.
- \* Cover with a Henri fountain cover. Keep tight and do not let snow or water collect in sagging areas.
- \* Do not allow snow or ice to build up on or against the concrete. Remove snow before it turns to ice. Do not use antifreeze, salt or chemical ice removers as these may damage concrete.
